Migration Overview

What is a Re-Deploy Strategy?

Instead of copying a VDI disk image the redeploy strategy:

1. **Inventories** all software on the source VDI
2. **Backs up** all installers of the software
3. **Builds a clean** Huawei Cloud Workspace desktop from a golden image
4. **Re-installs** all required software silently via msiexec
5. **Migrates** user **data**
6. **Validates** parity between source and target

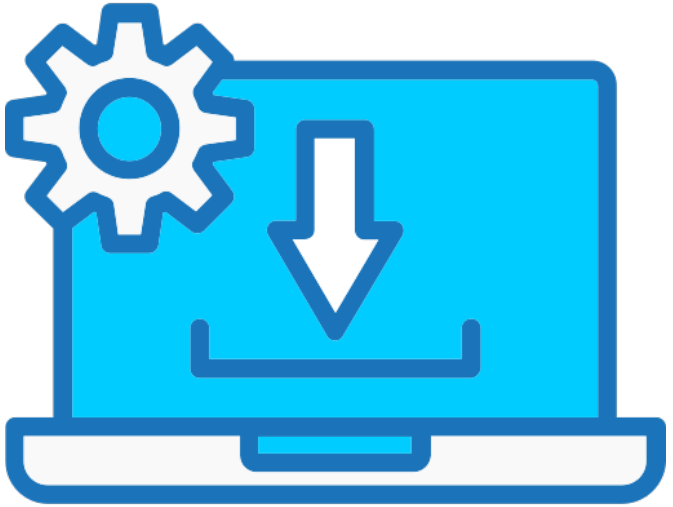

HUAWEI

Migration Overview

Why Re-Deploy?

Advantages:

1. **Fresh vendor image** without previous VDI bloat
2. **Correct Huawei drivers for Huawei Desktop Protocol,** since previous drivers may conflict with Huawei Workspace solution.
3. Explicit **install logs**
4. **Easy rollback**
5. Full **installer backup**

HUAWEI

Pre-requisites & Tooling

Workspace Migration Package

1. Skills
    1. windows-software-inventory
    2. windows-msi-inventory
    3. msi-batch-installer
2. Scripts & Artifacts
    1. scan_software.py
    2. scan_msi_installers.py
    3. install-msi.ps1
    4. run-elevated.ps1
    5. run-elevated-cmd.ps1
3. Installation
    1. Install Hermes

Environment Requirements

1. Source VDI
    1. Windows 10/11
    2. Powershell 3.0+
    3. Python 3.11+
    4. Admin Access
    5. Hermes Agent with **Workspace Migration Package**
2. Target VDI
    1. Hermes Agent with **Workspace Migration Package**
    2. Encapsulated VDI Image with Windows 10/11
    3. Huawei Desktop Protocol software
    4. Huawei drivers
3. Stagging Machine
    1. Hermes Agent with **Workspace Migration Package**
4. Huawei Cloud
    1. Workspace Desktop Pool configured
    2. AD Integration Ready

Source VDI Assessment

Environment: Source VDI

Goal: Produce a complete inventory of all installed software on the source VDI.

Skill: windows-software-inventory

Prompt:

> *Scan this machine for all installed software. Use the windows-software-inventory skill. Export the results as JSON or CSV. Then give me a summary of what was found, broken down by category.*

HUAWEI

MSI Installer Discovery and Backup

Environment: Source VDI

Goal: Locate all cached MSI installers on this system, read their properties, and back them up.

Skill: windows-msi-inventory

Prompt:

> *Now find and back up all third-party MSI installers from the source VDI. Use the windows-msi-inventory skill. For each MSI, read its properties via COM (ProductCode, UpgradeCode, Manufacturer). Back up all MSI files to .\msi-backup\ with meaningful filenames. Also check the InstallSource registry field for any original named .msi files that might still exist in download folders or temp dirs. Export the full MSI inventory as JSON and CSV. Report what was found, total size, and any MSIs that are missing from the cache.*

Then, move all the generated files into the **stagging machine** in **msi-backup** folder.

HUAWEI

Software Packaging and Stagging

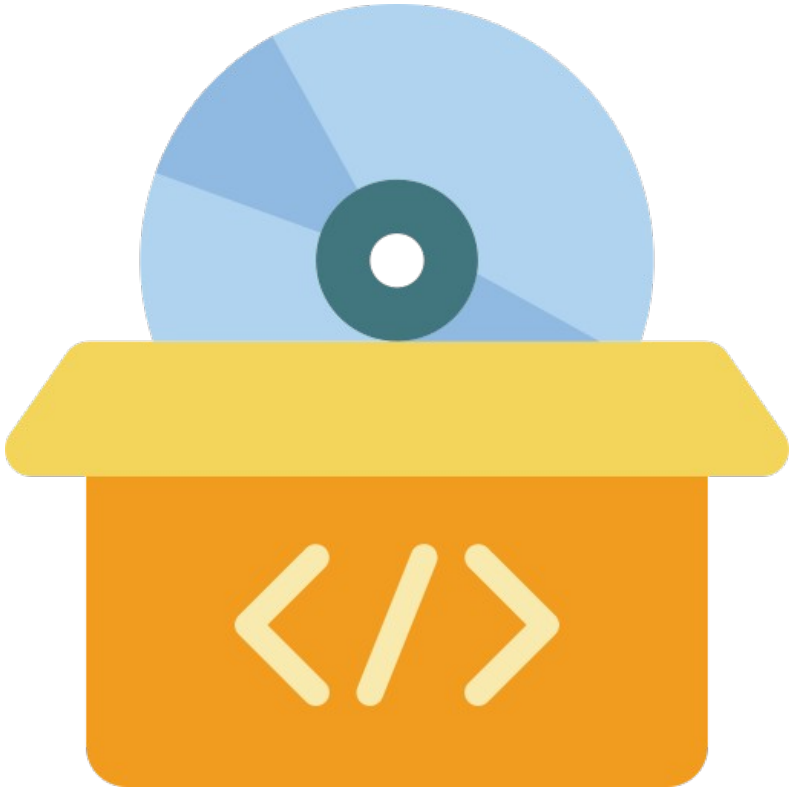

Environment: Stagging Machine

Goal: Organize all installers into a structured staging directory with a deployment manifest.

Skill: msi-batch-installer

Prompt:

> *Organize the staging share for deployment. Create the full directory structure in msi-backup (already done), and copy the MSI batch installer scripts from the msi-batch-installer skill into the scripts folder.*

HUAWEI

Software Deployment

Environment: Destination VDI

Goal: Silently install all MSI packages on the target desktop.

Skill: msi-batch-installer

Prompt:

> *Install all MSI packages from <folder> here. Use the msi-batch-installer skill. Install silently (no UI), continue on error, and log everything. After installation, review the logs for any failures and report which packages succeeded, which failed, and what the error codes mean. If any critical package failed, diagnose the issue from the log and attempt a fix.*

HUAWEI

Post-deployment Verification

1. Verify the log output of the installer script for errors
2. Manually retry failed installations until it succeds
3. Manually copy missing configurations and data (optional)
4. Reboot the machine
5. Make a final manual validation of the software being installed and configured
6. Remove Hermes Agent and .hermes configuration folder.
7. Remove any script file left on the system
8. Create a system image from the destination desktop instance

HUAWEI

Thank you.

Bring digital to every person, home and organization for a fully connected, intelligent world.
